Hi Lucia

How are you? It was so nice to meet you last week in Sydney at the sales meeting. How was the rest of your trip? Did you see any kangaroos? I hope you got home to Mexico City OK.

Anyway, I have the documents about the new Berlin offices. We're going to be open in three months. I moved here from London just last week. They are very nice offices, and the location is perfect. There are lots of restaurants, cafés and banks in the area. There's also public transport; we are next to a U-Bahn (that is the name for the metro here). Maybe you can come and see them one day? I would love to show you Berlin, especially in the winter. You said you *have never seen* snow – you will see lots here!

1. Here's a photo of you and me at the restaurant in Sydney. That was a very fun night! Remember the singing Englishman? Crazy! Please send me any other photos you have of that night. Good memories.

Please give me your email address and I will send you the documents.

Bye for now

Mikel

23. Marie Curie was one of the most accomplished scientists in history. Together with her husband, Pierre, she discovered radium, an element widely used for treating cancer, and studied uranium and other radioactive substances. Pierre and Marie's amicable collaboration later helped to unlock the secrets of the atom.

Marie was born in 1867 in Warsaw, Poland, where her father was a professor of physics. At an early age, she displayed a brilliant mind and a cheerful personality. Her great exuberance for learning prompted her to continue with her studies after high school. She became disgruntled, however, when she learned that the university in Warsaw was closed to women. Determined to receive a higher education, she defiantly left Poland and in 1891 entered the Sorbonne, a French university, where she earned her master's degree and doctorate in physics.

Marie was fortunate to have studied at the Sorbonne with some of the greatest scientists of her day, one of whom was Pierre Curie. Marie and Pierre were married in 1895 and spent many productive years working together in the physics laboratory. A short time after they discovered radium, Pierre was killed by a horse-drawn wagon in 1906. Marie was stunned by this horrible misfortune and endured heart-breaking

anguish. Despondently she recalled their close relationship and the joy that they had shared in scientific research. The fact that she had two young daughters to raise by herself greatly increased her distress.

Curie's feeling of desolation finally began to fade when she was asked to succeed her husband as a physics professor at the Sorbonne. She was the first woman to be given a professorship at the world-famous university. In 1911 she received the Nobel Prize in chemistry for isolating radium. Although Marie Curie eventually suffered a fatal illness from her long exposure to radium, she never became disillusioned about her work. Regardless of the consequences, she had dedicated herself to science and to revealing the mysteries of the physical world.

23. The Curies' _____ collaboration helped to unlock the secrets of the atom.

A. friendly

B. competitive

C. courteous

D. industrious

E. chemistry

Climate change refers to long-term shifts in temperature, precipitation, and other atmospheric conditions. These changes have profound effects on wildlife populations around the world. As temperatures rise, habitats change, forcing many species to migrate in search of suitable conditions. This can lead to disruptions in ecosystems and loss of biodiversity. Additionally, extreme weather events such as heatwaves, hurricanes, and droughts become more frequent and intense, further threatening wildlife. Conservation efforts are crucial to mitigate the impacts of climate change on vulnerable species.

32.

32. What is the main topic of the passage?

- A. Climate change and its impact on wildlife
- B. Environmental conservation efforts
- C. Effects of pollution on ecosystems
- D. Wildlife migration patterns
- E. Human activities and their effect on climate change

TikTok is often applauded for its recommendation system; once it's finely tuned, the app becomes one of the best scrolling experiences. My personal theory is that's why TikTok is so addicting-everything is so perfectly curated to your specific interests, it's hard to put the phone down once you're sucked in. However, TikTok's recommendation algorithm still has its own flaws that the company brings up in its new blog post.

"One of the inherent challenges with recommendation engines is that they can inadvertently limit user experience-what is sometimes referred to as a 'filter bubble'," the post reads. It states that by optimizing for personalization and relevance, there is a risk of presenting an increasingly homogenous stream of videos.

41.

Another issue that TikTok takes seriously is not surfacing dangerous content. This is an issue that YouTube in particular has faced criticism over for many years. According to TikTok, content that has graphic material like medical procedures or "legal consumption of regulated goods," like alcohol, may not be eligible for recommendation because it could come across as "shocking if surfaced as a recommended video to a general audience". That's why many creators on TikTok will upload a video more than once or talk openly about feeling shadow banned over particular content.

41. The writer of the passage intends to_____

A. Illustrate TikTok users' concerns about the app's recommendation system.

B. Oppose the idea that TikTok has a sophisticated recommendation system

C. Warn the readers about TikTok's poor recommendation system

D. Inform about the downsides of TikTok's recommendation system

E. Explain how TikTok resolves the recommendation system issue
